PS-LX22(A): SILVER TYPE
AEP Model

PS-LX22B: BLACK TYPE
AEP Model

The PS-LX22(US, Canadian model) is not supplied with a cartridge, while the PS-LX22(AEP, UK model), LX22(A), and LX22B(A) are supplied with an XL-150 cartridge and the PS-LX22C is supplied with a VL-5 cartridge.
 The PS-LX22(A) and LX22B(A) are not supplied with a dust cover.

STEREO TURNTABLE SYSTEM

SPECIFICATIONS

Turntable

Platter	30.4 cm (12 in.), aluminum-alloy diecast
Motor	Linear torque BSL (brushless and slotless) motor
Drive system	Direct drive
Control system	FG servo control system
Speed	33 $\frac{1}{3}$ rpm, 45 rpm
Starting characteristics	Comes to nominal speed within a half revolution (33 $\frac{1}{3}$ rpm)
Wow and flutter	0.04% (WRMS)* 0.055% (WRMS) ±0.05% (DIN)
Signal-to-noise ratio	72 dB (DIN-B)

Tonearm

Type	Statically balanced
Pivot-to-stylus length	216.5 mm (8 $\frac{5}{8}$ in.)
Overhang	16.5mm (2 $\frac{1}{32}$ in.)
Stylus force adjustment range	0 – 3 g
Cartridge shell weight	5.2 g (US, Canadian model)
Cartridge weight range (including a cartridge shell)	7.5 – 12 g

—Continued on page 2—

SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY SHADING AND MARK  ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!

LES COMPOSANTS IDENTIFIÉS PAR UNE TRAME ET UNE MARQUE  SUR LES DIAGRAMMES SCHÉMATIQUES, LES VUES EXPLOSÉES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

Note

Appliance conforms with EEC Directive 76/889 regarding interference suppression.

* This new measuring method concerns only the turntable assembly, including the platter. It excludes wow and flutter caused by the tonearm, the cartridge, or the record. Measured by obtaining signal from magnetic pick-up head.

SONY[®]

SERVICE MANUAL

Cartridge XL-150 (supplied only with the PS-LX22: AEP, UK Model, LX22(A), and LX22B(A))

Type	Moving magnet type
Frequency response	10 Hz to 25kHz
Channel separation	20 dB at 1 kHz
Output voltage	3 mV at 1 kHz, 5 cm/sec.
Load impedance	50 to 100 kilohms
Tracking force	1.3 to 2.3 g (1.8 g recommended)
Stylus	Sony-ND-150G (Conical 0.6 mil diamond)
Weight	8.8 g

Cartridge VL-5 (Supplied only with the PS-LX22C)

Type	Moving magnet type
Frequency response	10 Hz to 20 kHz
Channel separation	20 dB at 1 kHz
Output voltage	3.5 mV at 1 kHz, 5 cm/sec.
Load impedance	47 to 100 kilohms
Tracking force	1.5 to 2.5 g (2.0 g recommended)
Stylus	Sony ND-5G (Conical 0.6 mil diamond)
Weight	5.0 g

General

Power requirements	AEP model: 220 V ac UK model: 240 V ac US, Canadian model: 120 Vac, 60 Hz
Power consumption	5W
Dimensions	Approx. 430 x 110 x 355 mm (w/h/d) (17 x 4 ³ / ₈ x 14 in.) including projecting parts and controls
Weight	Approx. 4 kg (8 lbs 13 oz), net Approx. 4.3 kg (9 lbs 8 oz), in shipping carton

FEATURES

- The linear torque BSL (brushless and slotless) direct drive servo motor has a high signal-to-noise ratio.
- The low-mass tonearm and cartridge allow the stylus to track with greater accuracy.
- The precise tracking force for the supplied cartridge is easy to set using a simple tracking force setting guide. (AEP, UK model)
- Disc centering guides facilitate placing a 30 cm record over the center spindle.
- The turntable has resilient feet that isolate the mechanism from external shock and vibration.

MODEL IDENTIFICATION

— Specification Label —

PS-LX22B, LX22B(A)

PS-LX22, LX22C, LX22(A)

AEP model: AC: 220V ~ 50/60Hz 5W

UK model: AC: 240V ~ 50/60Hz 5W

US, Canadian model: AC: 120V ~ 60Hz 5W

* Servo PC Board

There are 2 types of Servo PC Board for PS-LX22.

	Former Type	New Type
Part No.	1-607-275-11	1-607-275-13

(PS-LX22B has new type only.)

SAFETY CHECK-OUT (US Model)

After correcting the original service problem, perform the following safety check before releasing the set to the customer:

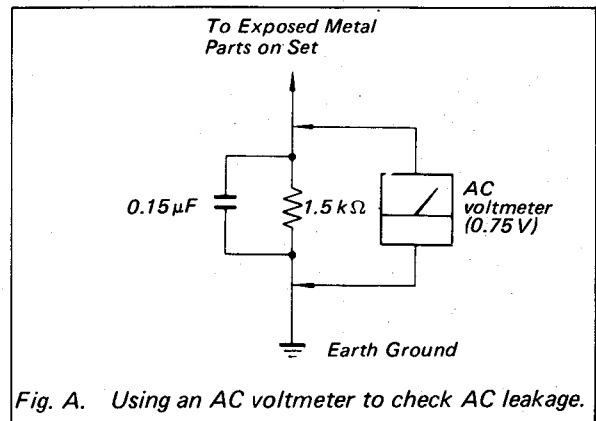

Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microamperes). Leakage current can be measured by any one of three methods.

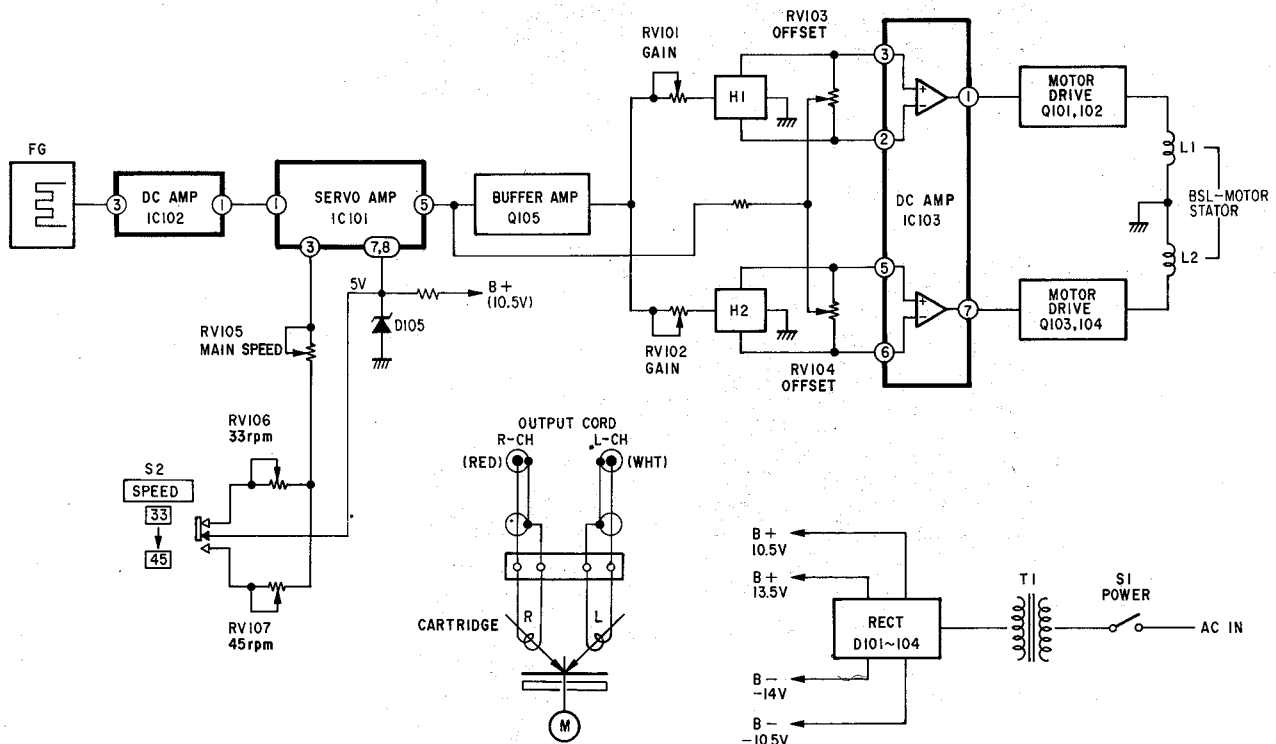

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.

3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2V AC range are suitable. (See Fig. A)

SECTION 1 OUTLINE

1-1. BLOCK DIAGRAM

1-2. CIRCUIT DESCRIPTION**MOTOR**

The method for detecting change in turntable rotation speed for the BSL (Brush and Slotless) DC servo motor on this set is different from the conventional method (detection by MG head fixed to the frame). On this set it is performed by the FG board fixed to the stator.

For this purpose, 256 poles of magnetization (SN alternately) are shallowly layered on the surface of the drive magnetizer (8 poles alternately SN) on the magnet used to rotate the rotor.

The frequencies detected at the FG board are:

33 $\frac{1}{3}$ rpm --- 71.1 Hz

45 rpm ----- 96.0 Hz

**Motor Internal Diagram
(upper surface)**

(cross-section)

Motor External View

External View of FG Board (with rotor removed)

ELECTROMOTANCE GENERATED ON FG BOARD

On the FG board, if the radial pattern **A** in Figure 1 is considered as one conductor, when the rotor rotates, the conductor cuts the magnetic flux, electromotance is generated on the conductor, and its direction changes from the Fleming's right-hand rule to that in Figure 1.

Overall, the spacing of the radial pattern on the FG board and the rotation speed detection sine-wave magnet peak is the same, so the electromotance generated in all of the patterns is directed in a uniform direction as shown in Figure 2 if the pattern is considered as one loop.

Therefore, the electromotance generated on the one pattern **A** on the FG board has 256 poles worth of electromotance added. (circular integral method)

The frequencies detected on the FG board are obtained as follows.

For one radial pattern, sine-wave electromotance is generated one time for 2 SN poles.

Therefore, when the rotor rotates one time:

$$256 \text{ (poles)} \div 2 = 128 \text{ (times)}$$

For 45 rotations:

$$128 \text{ (times)} \times 45 \text{ (rpm)} \div 60 \text{ (seconds)} = 96 \text{ (Hz)}$$

In the same way, for $33\frac{1}{3}$ rotations:

$$128 \text{ (times)} \times 33\frac{1}{3} \text{ (rpm)} \div 60 \text{ (seconds)} = 71.1 \text{ (Hz)}$$

Fig. 2

FG Board Pattern Diagram (pattern surface)

Fleming's right-hand rule

SECTION 2 DISASSEMBLY

Note:

- Follow the disassembly procedure in the numerical order given.
- Be sure to note the parts placements/positionings of each other before disassembling them part.

TURNTABLE REMOVAL**Caution for installation:**

Move the clutch in the direction as shown by the arrow and put it the inside of the drive gear.

**BOTTOM BOARD REMOVAL**

SERVO AMP BOARD / STATOR ASS'Y / ROTOR ASS'Y REMOVAL

7 Turn the FG board in the direction as shown by the arrow and remove it.

When installing, run the lead wires of the motor coil through the grooves of the PC board holder.

ANTI-SKATING KNOB INSTALLATION

If necessary, apply grease (SGL-501) to the specified portion.

**LIFTER LEVER ASS'Y INSTALLATION**

If necessary, apply grease (SGL-501) to the specified portion.

**MAIN LEVER INSTALLATION**

If necessary, apply grease (SGL-501) or silicon oil (viscosity: 100CS) to the specified portion.

ASSEMBLING THE TONEARM

TONEARM INSTALLATION

Switch-Lever Positioning:

1. Place the tonearm on the tonearm rest.
2. Position the drive gear to the rest mode.
3. Position the part A of the switch lever 1mm off the microswitch's actuator as shown in the figure and tighten the set screw securely.

LUBRICATION

1. When the motor rotor ass'y is replaced, apply Sony oil OL-2KA to the rotor shaft as illustrated below.

2. When replacing the lifter lever (D) or (E), apply silicon oil (viscosity: 500CS) as shown below.

3. Lubrication for push rod

CAUTION:

When lubricating, rotate and move the push rod up and down a few times.

SECTION 3

ADJUSTMENTS

Note: Before performing the adjustments, make a proper stylus-force setting, 1.8g (XL-150).

3-1. MECHANICAL ADJUSTMENTS

Longitudinal Sensitivity Adjustment

1. Make the longitudinal balance adjustment of tonearm.
2. Repeating the following procedures, adjust the pivot screws and the lock nuts.
 - a. When the 70 mg weight is placed on the top of the shell, the tonearm sinks more than 5 mm ($\frac{3}{16}$ ") measured at stylus-tip.
 - b. When the weight is removed, the tonearm returns horizontally.

Note: Adjust screws so that they protrude in the same amount.

Automatic Return Position Adjustment

1. Reject the tonearm by REJECT button.
2. Bring the tonearm to the automatic-return test groove (inside portion) of the test record (YFSC-16), and adjust the screw for making the tonearm return at count 3 to 12.

Note: The normal auto-return position is between 59 mm ($2\frac{3}{8}$ ") and 64 mm ($2\frac{1}{2}$ ") from the center of the center shaft.

Turning direction	Automatic return
clockwise	late
counterclockwise	early

Tonearm Height Adjustment

Note: Perform both adjustments A) and B).

A)

1. Bring the tonearm toward the inner of the record and put the stylus in the last groove of the record.
2. Push the REJECT button and slowly turn the turntable by hand to lift the tonearm.
3. Adjust the height of the tonearm lifter by turning the adjustment screw(A) so that the clearance between the stylus tip and the record is approx. 6 mm ($\frac{1}{4}$ ") to 12 mm ($\frac{15}{32}$ ").
4. After the adjustment, make sure by turning the turntable by hand that the tonearm smoothly returns to the tonearm rest.

B)

1. Make a lifter up mode by lifting up the cueing lever.
2. Bring the tonearm to the outer-most record groove. With this condition, adjust the adjustment screw (B) so that the clearance between the stylus tip and the record surface becomes in 6 mm ($\frac{3}{16}$ ") to 12 mm ($\frac{15}{32}$ ").
3. Move the tonearm to the inner-most groove. In this condition, the clearance between the stylus tip and the record surface should also be 6 mm ($\frac{1}{4}$ ") to 12 mm ($\frac{15}{32}$ ").
4. The clearance difference between A) and B)-3 should be less than 4 mm ($\frac{3}{16}$ ").
5. After the adjustment, lock the adjustment screw (B) with locking compound.

adjustment screw (B)
clockwise: clearance increases
counterclockwise: clearance decreases

Cartridge Level Adjustment

Loosen the two screws and adjust the position of the locking collar so that the point **A** and point **B** become horizontal.

Note: Move the tonearm inside to just above the adjustment hole in the frame. The two screws are accessible through the hole from the bottom side using a screwdriver.

3-2. ELECTRICAL ADJUSTMENTS

Speed Adjustment

Note: Use a small-blade screwdriver for the adjustments.

1. Connect a frequency counter to pin ① of IC102.
2. Turn the power switch on.

3. Turn the SPEED switch to 45.
4. Adjust the coarse adjustment RV105 for a 96Hz reading on the frequency counter.
If it is not obtained 96Hz, adjust the fine adjustment RV107 for 95.72 – 96.26 Hz reading.
5. Turn the SPEED switch to 33.
6. Adjust the fine adjustment RV106 for 70.90 – 71.32Hz reading.

RV106

RV105

RV107

③
(ground pin)

Gain/Offset Adjustments

1. Connect the pattern ② to the ground pin ③, and apply a 1V dc to the pattern ①.
2. Turn the power switch on.
3. Adjust the gain adjustment RV101 at the switch position H1 for a 4 Vp-p reading on the oscilloscope.
4. Adjust the gain adjustment RV102 at H2 for a 4 Vp-p reading.
5. Adjust the offset adjustment RV103 at H1 for a 0V dc centering on the waveform.
6. Adjust the offset adjustment RV104 at H2 for a 0V dc centering.
7. After the adjustments, disconnect the pattern ② from the ground pin ③ and remove the dc-voltage connection from the pattern ①.

RV101, 102

RV103, 104

H1

H2

Note: Set the sweep time longer for easy waveform checking.

Note: This pattern is former type.

NOTE:

- Items with no part number and no description are not stocked because they are seldom required for routine service.
- Items marked "▲" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (▲-△△△-△△△-XX or ▲-△△△△-△△△-X) may be different from those used in the set.

CAPACITORS:

- All capacitors are in μF . Common capacitors are omitted. Refer to the following lists for their part numbers.
MF: μF , PF: μpF .

RESISTORS

- All resistors are in ohms. Common 1/4W, 1/8W and 1/16W carbon resistors are omitted. Refer to the following lists for their part numbers.

- F : nonflammable

COILS

- MMH : mH, UH : μH

The components identified by shading and mark ▲ are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque ▲ sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

HARDWARE NOMENCLATURE

Screw:

Unless otherwise indicated, it means cross-recessed head (Phillips type).

Nut, Washer, Retaining ring:

Reference Designation	Shape	Description	Remarks
SCREWS			
P		pan-head screw	binding-head (B) screw for replacement
PWH		pan-head screw with washer face	binding-head (B) screw and flat washer for replacement
PS PSP		pan-head screw with spring washer	binding-head (B) screw and spring washer for replacement
PSW PSPW		pan-head screw with spring and flat washers	binding-head (B) screw and spring and flat washers for replacement
R		round-head screw	binding-head (B) screw for replacement
K		flat-countersunk-head screw	
RK		oval-countersunk-head screw	
B		binding-head screw	
T		truss-head screw	binding-head (B) screw for replacement
F		flat-fillister-head screw	
RF		fillister-head screw	
BV		brazer-head screw	

Reference Designation	Shape	Description	Remarks
SELF-TAPPING SCREWS			
TA		self-tapping screw	ex: TA, P 3 x 10
PTP		pan-head self-tapping screw	binding-head self-tapping (TA, B) screw for replacement
PTPWH		pan-head self-tapping screw with washer face	binding-head self-tapping (TA, B) screw and flat washer for replacement
PTTWH		pan-head thread-rolling screw with washer face	binding-head (B) screw and flat washer for replacement
SET SCREWS			
SC		set screw	
SC		hexagon-socket set screw	ex: SC 2.6 x 4, hexagon socket
NUT			
N		nut	
WASHERS			
W		flat washer	
SW		spring washer	
LW		internal-tooth lock washer	ex: LW3, internal
LW		external-tooth lock washer	ex: LW3, external
RETAINING RINGS			
E		retaining ring	
G		grip-type retaining ring
